Summary

Full-Stack Developer with 9+ years of experience building enterprise web applications end-to-end – from React/Angular front ends to ASP.NET Core backends, REST APIs, and SQL Server/PostgreSQL databases. Strong background in system design, microservices, and third-party integrations, delivering reliable production software within Agile teams.

Education

Bachelor of Computer Science **2013**
Helwan University Cairo, Egypt

Experience

Full-Stack Software Developer **May 2021 – Present**
OnSpec Oil & Gas Sector – Enterprise Software Solutions

- Designed and developed enterprise backend systems and REST APIs using ASP.NET Core, and full-stack apps with Angular/React for workflow automation and reporting.
- Led system design and architecture decisions for new features/services, applying design patterns, Clean Architecture, and SOLID principles.
- Built and integrated microservices and third-party integrations (GitHub, Google APIs, Aspen HYSYS), eliminating manual processes.
- Worked within Agile/Scrum teams – sprint planning, code reviews, iterative delivery.
- Optimized PostgreSQL and SQL Server queries/performance in production.
- Deployed applications using Docker containers and CI/CD pipelines (GitHub Actions, Jenkins) set up by the DevOps team.

SharePoint Developer **Aug 2017 – Feb 2021**
Nile Sugar Company Sugar Manufacturing – Factory & Head Office Automation

- Converted paper-based, manual approval processes into automated digital workflows using SharePoint 2013, SPFx, InfoPath, and Power BI.
- Automated truck delivery tracking and real-time production dashboards (Beet Load Management).
- Built multi-stage budget and HSE approval workflows for project budget automation.
- Developed a suite of workflow systems for Change Request, Device Exit, and Warehouse & Farm Automation.
- Implemented energy/fuel tracking reports and automated timer job alert systems.

Software Developer **Nov 2014 – Jul 2017**
MAS Company Desktop & Web Business Systems

- Developed and maintained core business applications using C#, ASP.NET MVC, C++, and SQL Server, including Inventory, Supplier, Customer, POS, and HR systems.
- Gained foundational experience in MVC architecture and core business-logic implementation.

Technical Skills

Frontend: React, Angular, TypeScript, JavaScript (ES6+), Vite, TanStack Query, Tailwind CSS, shadcn/ui, i18n, jQuery, HTML/CSS
Backend: C#, ASP.NET Core MVC, Node.js, Express, Django, Entity Framework Core, LINQ, RESTful API Design, COM Interop, VB.NET
Database: SQL Server, PostgreSQL, Database Design & Optimization, Stored Procedures, Query Optimization, Multi-Database CRUD
Architecture & Integrations: System Design, Microservices Architecture, Clean Architecture, SOLID Principles, Design Patterns, Aspen HYSYS Integration (COM Interop), GitHub API, Google APIs (Calendar, Meet), PostgREST, API Gateway Design (JWT/API Key Auth)
Enterprise & Automation: SharePoint (SPFx, InfoPath, Workflows), Business Process Automation, Enterprise Workflow Systems, Timer Jobs & Alert Systems
DevOps & Tools: Git & GitHub, Deploying via Docker & CI/CD Pipelines (Jenkins, GitHub Actions), Authentication & Authorization (JWT, OAuth, RBAC)
Methodologies: Agile/Scrum, Sprint Planning, Code Reviews, TDD

Projects

iCAM / **ADNOC** – Mission-critical web app integrating Aspen HYSYS via COM Interop for real-time separator vessel calculations and multi-year scenario planning.

Workflow Wizard EGPC – Multi-company, five-language (i18n) workflow platform (React 18, TypeScript, Vite, TanStack Query, PostgREST) with dynamic configuration, task assignment, and RBAC.

EGPC Daily Report System – Bilingual (Arabic/English, RTL) drag-and-drop report builder (React 18 + TypeScript) with a Node.js/TypeScript API, JWT auth, RBAC, and offline/air-gapped deployment.

Document Management System – React/TypeScript DMS with a Node.js/Express + PostgreSQL backend (Clean Architecture), secure file APIs (Multer), and role-based access.

Integration Platform – Django API gateway (JWT/API key auth) plus a companion microservice handling multi-database CRUD across SQL Server warehouses at 1M+ records/5 sec, deployed via Docker and Jenkins pipelines.

SyncPulse – Independently built full-stack Angular platform automating daily stand-ups via GitHub, Google Meet, and Calendar API integrations.
